

The HidePrice module, which is made with simplicity, allows to hide prices for certain customer groups, with also the possibility to simplify 'price' loading process for performance purposes. Though with simplicity, it is designed in a way that can be extended easily by other developers.

Behind the stage, many types of prices are still loaded though no prices are shown on the front page. For this reason, this module adds possibility to simplify the load for some specific heavy-load prices (base price, tier price, final price, minimal price, ...)

For example,

- Base Price is the min value of various price types (regular price, special price, catalog rule price, ...), which involves the fetch of many price types. When prices are hidden, and base price is not needed in other modules, simplifying base prices can add positive effect to the page performance.

Panca Extensions' Hide Price is located under 'Stores / Configuration'

Customer groups must be selected when enabling hide-price service. If no customer groups is selected, the functionality is technically disabled.

Hide Price for customer group [store view]

ALL GROUPS
NOT LOGGED IN
General
Wholesale
Retailer

☐ Use system value

'Add To Cart' button

- It can be hidden, in cases of both 'enabled' and 'non-enabled' hide-price functionality
- It is independent of the setting for 'Hide Price Enabled', which means in case you set 'enabled' for hide-price functionality, 'Add To Cart' button is not automatically disabled.

General

Enable Hide Price [store view] ☐ Use system value

Disable 'Add To Cart' [store view] ☐ Use system value

NOTE: This setting is independent of 'Enable Hide Price'

Text displayed instead of price

- It is empty string by default

Replace price with text
[store view]

`html`

☐ Use system value

Text shown instead of price

Price Load

Configuration for price loading

Define which prices are loaded when prices are hidden on the front page

Load Base Price
[store view]

No

☐ Use system value

Load Tier Price
[store view]

No

☒ Use system value

Load Minimal Price
[store view]

No

☒ Use system value

Load Final Price
[store view]

No

☒ Use system value

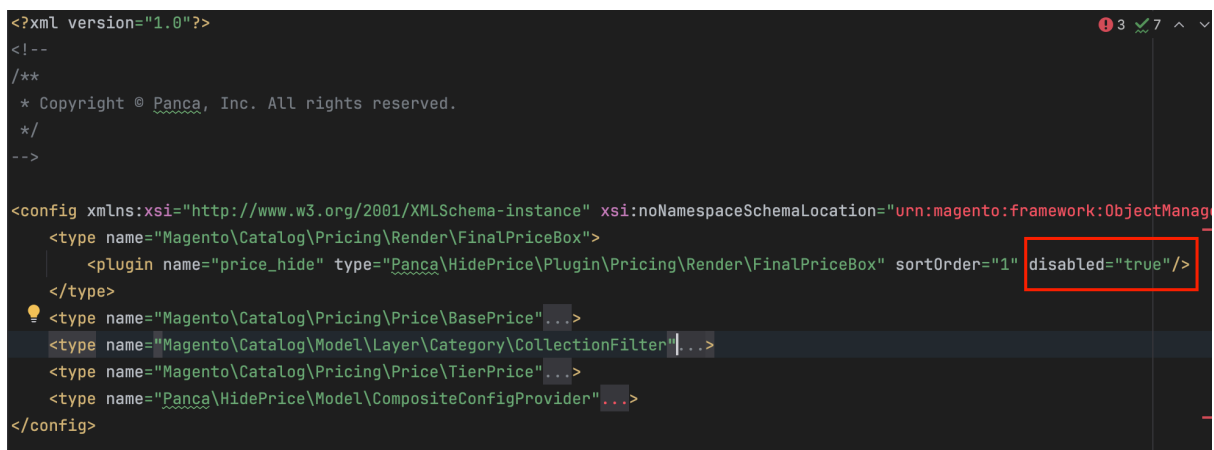

These settings for Price Load result in changes in the backend (specially, how prices are loaded). These settings work only when Hide Price is enabled.

To see the changes (Enabled Hide Price must be set to Yes),

- If the 'Load Base Price' is set to 'No', debug plugins 'simplifyBasePriceLoad' which is set in module-hide-price/etc/frontend/di.xml, to see that it just simply returns regular price of the product.

- If the 'Load Tier Price' is set to 'No', debug plugins 'simplifyTierPrice', which is set in module-hide-price/etc/frontend/di.xml, to see that it just simply returns regular price of the product.
- If the 'Load Tier Price' is set to 'No', debug plugins 'simplifyTierPrice', which is set in module-hide-price/etc/frontend/di.xml, to see that it just simply returns empty array without any prices.
- If the 'Load Minimal Price' is set to 'No', debug plugins 'simplifyCollectionFilter', which is set in module-hide-price/etc/frontend/di.xml, to see that function to add minimal price addMinimalPrice() will not be called.
- If the 'Load Final Price' is set to 'No', debug plugins 'simplifyCollectionFilter', which is set in module-hide-price/etc/frontend/di.xml, to see that function to add final price addFinalPrice() will not be called.

Another way to see the changes on the frontend without debugging
(Enabled Hide Price must be set to Yes)

```
<?xml version="1.0"?>
